Arathoon et al.

Supplemental Amendment after Final and Interview Summary

## LISTING OF THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in this application and does not reflect the changes made in the Amendment mailed on April 6, 2007, which was not entered. Added text is indicated by underlining, and deleted text is indicated by ~~strikethrough~~.

### Listing of Claims:

1-29 (Canceled)

30. (Currently Amended) A method of preparing a multispecific antibody comprising a first polypeptide and at least one additional polypeptide, wherein

(a) the first polypeptide comprises a heavy chain constant domain comprising a first multimerization domain forming an interface positioned to interact with an interface of an additional multimerization domain of the at least one additional polypeptide, wherein each of the additional polypeptides comprises a heavy chain constant domain comprising a multimerization domain,

(b) the first and additional polypeptides each comprise a binding domain, the binding domain comprising a heavy chain variable domain and the same light chain variable domain, wherein each binding domain binds to a different antigen, and

(c) the first and additional multimerization domains interact with one another to form the multispecific antibody, the method comprising the steps of:

(i) culturing a host cell comprising a nucleic acid encoding the first polypeptide and a nucleic acid encoding at least one additional polypeptide, wherein the culturing is such that the nucleic acids are expressed; and

(ii) recovering the multispecific antibody from the host cell culture.
